The folder structure:

```
cs325/
├── calculator.py
├── Dockerfile
├── req
│    └── requirements.txt
├── test_calculator.py
├── .github
│    └── workflows
│         └── dockerCI.yml
│
```

The code is in the zip folder.

The **.github** is a hidden folder that you have to manually create and the folder **workflows** too. When you are creating a new project

After you upload the code into a repo look at the Github actions tab. Change the file and make some mistakes and see how the test case is gonna fail inside the GitHub Actions.

Coming up Quiz-9.
